

We create **clarity** for businesses and projects to **succeed**

Global experience meets leading technology

ProjectAI is an international advisory and technology firm. We lean on our lived experiences to fuse the right processes, people and technology for our clients to create the clarity that can transform how businesses and projects work.

More control with fewer surprises

Do more with less

Every business has the power to drive change — big and small — but not all realise this potential. Disengaged stakeholders, disjointed and inaccurate data and other inefficiencies can derail projects, landing businesses with cost and schedule blowouts.

It doesn't have to be this way.

At ProjectAI, we combine deep expertise in business strategy, organisation design, and project management with the power of leading technologies, giving businesses unparalleled transparency to select, plan and execute their projects with a new level of insight.

Projects become safer, more competitive and predictable — running on-time and on-budget while delivering quality outcomes. The ProjectAI approach means fewer surprises and gives businesses more control over their projects and performance.

ProjectAI creates clarity

Clarity is the cornerstone of every successful project or business transformation. From start-ups to large businesses — no matter the size of the project — ProjectAI helps organisations make better decisions by giving them transparency and control of their data and decisions to achieve goals faster and cost-effectively.

A new way of thinking

We start by understanding your strategy, what your business wants to achieve and the constraints you are working within. With a holistic view, we then identify how you can optimise your human and capital resources across the value chain, unlocking efficiencies to make your business, your programs, people and projects more successful.

PROJECTS
